Bluetooth connection

1. To start with this, please make sure that there are Bluetooth

in both electronic products you are trying to connect. In our case, we'll consider connecting our items to a smart device that has Bluetooth such as an iphone, an Android or a tablet. Once assure of Bluetooth existence and both devices powered up and turned on we can proceed to the next step.

2. Bluetooth discovery, as the name implies, the next step is to help discover each other device. This is done by making one device broadcast it's presence and using the other to look for the broadcasting one. Usually is the "smarter" one like the i Phone.

3. Paring, once discovered (step 2 above) you need to pair the two to allow them to work together. Pairing usually involves clicking on the discovered device and sometimes, if necessary, entering a pass code.

4. Sharing and enjoying

WIFI connection
This device can be connected to internet by WIFI

1.   In the main interface, press menu menu-setting

2.   Press setting

3. Press WI-FI on, your android player will search for all of the available WI-FI internet

4. Choose the one you want to connected with, and please input the related password if it is needed.

5. Press "connect"

FCC Information and Copyright

This equipment has been tested and found to comply with the limits for a Class B digital device,
pursuant to part 15 of the FCC Rules.
These limits are designed to provide reasonable protection against harmful interference in a residential
installation. This equipment generates,
uses and can radiate radio frequency energy and, if not installed and used in accordance with the
instructions, may cause harmful interference
to radio communications. However, there is no guarantee that interference will not occur in a particular
installation. If this equipment does
cause harmful interference to radio or television reception, which can be determined by turning the
equipment off and on, the user is
encouraged to try to correct the interference by one or more of the following measures:
—Reorient or relocate the receiving antenna.
—Increase the separation between the equipment and receiver.
—Connect the equipment into an outlet on a circuit different from that to which the receiver is
connected.
—Consult the dealer or an experienced radio/TV technician for help.
